

Not getting enough backup time?

Increase your runtime by simply adding battery banks.

Available in a rack or tower design, the **Centurion RT** is PowerShield's highest single phase power density UPS.

This True Online Double Conversion UPS will fully protect mission critical devices as it can support larger loads than UPS products of an equal VA rating—and by simply adding Battery Banks, you can increase runtimes as required.

Available from 1000 to 10,000VA, this robust range is the perfect power protection solution for critical environments.

***Based on a standard server load of 1500VA.**

Image features the Centurion 2000 UPS, a shorter depth model perfect for Comms Racks.
