## PowerShield Introduces New Defender UPS

With a higher 2000 VA rating, the newest UPS to join the Defender Range offers users a bigger Uninterruptible Power Supply option to protect electrical equipment. In a compact tower form, the Defender 2000 builds on the popular entry level line interactive range with all of the same features that make the Defender a best seller for home and office equipment users.

With the highest surge rating in its class, the Defender Range challenges the notion that a simulated sine wave, line interactive UPS can not offer the reliability and quality of a higher specified UPS, being specifically designed by Australian engineers to provide a robust power protection solution to meet the power problems found in Australia and the Asia Pacific region.

"The Defender 2000 model rounds out the Defender lineup by offering a greater VA rating to extend the family," said Malcolm Levin, Director of Sales and Marketing for PowerShield. "For those home and office users who have more devices and energy load requirements but do not want the expense of a pure sinewave UPS, the Defender offers unparalleled quality and features that make it one of our most popular choices in our entry level range."

With its silent operation (it's fanless), its simple user replaceable battery design, easy-view LCD screen and friendly plug-and-play HID compatibility, the Defender 2000 is a welcome addition to the range and sure to be in high demand.

## AVAILABILITY & PRICE

The Defender 2000 model will be available from July 2021. Pre-order is available now. RRP: \$506

## ABOUT POWERSHIELD

Power Shield is the Australian power protection company specialising in developing and providing Uninterruptible Power Systems (UPS Supply) and power filtration products specifically for the Asia-Pacific market.

Power Shield understands Australia's power problems and has been instrumental in solving them for thousands of businesses since its inception in the year 2000. The company is focused on customer service and the management team seeks constant and never ending improvement.

The company's overall goal is to provide the cleanest and most reliable quality power and economical protection against electrical disturbances for all valuable equipment.

A well known and trusted brand throughout Australia, PowerShield engineers solutions for many projects first hand. A diverse customer list includes radio stations, government, defence, security, health and medical departments, mines, process control operations, point of sale, system integrators and server room applications to name a few.

A progressive company with energetic people focused on helping others with their business continuity, Power Shield aims to ensure equipment works efficiently and for as long as possible.

Continued and uncompromising development of the best possible UPS technology and a dedication to relentless customer care has catapulted the business to become one of Australia's largest independent UPS manufacturing companies – and the best choice for protecting any electrical power supply.
